

Senior Full Stack Engineer

Job Overview:

We are looking for a Senior Full Stack Engineer to build and maintain the web applications powering a tokenized real estate marketplace.

The role requires strong architectural thinking, a production mindset, and a focus on delivering high-quality, performant web applications.

Responsibilities:

- Frontend Development: Design and implement dynamic, user-friendly web interfaces using React.js, Next.js, and modern JavaScript frameworks.
- Backend Development: Build and maintain server-side applications using Node.js with Express.js or NestJS to support core platform features.
- Database Management: Develop and optimize data storage and retrieval using MongoDB, PostgreSQL, and Redis.
- API Development & Integration: Develop and maintain RESTful and GraphQL APIs for seamless integration between frontend and backend systems.
- Smart Property Integration: Integrate smart home systems and IoT devices with the platform to enable remote property control and monitoring.
- Security & Compliance: Ensure secure handling of user data and transactions, adhering to regulatory compliance and best practices for data privacy and integrity.
- Testing & QA: Write unit tests and integration tests to ensure platform reliability, performance, and security.
- Collaboration: Work closely with blockchain engineers, product managers, and designers to align technical decisions with business goals and user needs.

Requirements:

- 5+ years of full stack web development experience
- 3+ years of experience with React.js, Next.js, Node.js, Express.js/NestJS
- Strong experience with MongoDB, PostgreSQL, Redis, and related database technologies
- Proficiency in RESTful and GraphQL API development
- Experience with authentication, authorization, and security best practices
- Experience in cloud infrastructure (AWS, GCP) and containerization tools like Docker
- Familiarity with Web3.js or Ethers.js for future integration (nice to have)
- Strong understanding of CI/CD pipelines and modern web application performance optimization
- Ability to write clean, maintainable, and scalable code, with a strong focus on security

Nice-to-Haves:

- Experience building marketplace platforms, property management applications, or similar real-world infrastructure projects
- Knowledge of IoT and smart home system integration
- Experience working with blockchain technologies for future tokenization or smart contract integration
- Familiarity with serverless architectures and cloud-native solutions

Benefits:

- 100% Remote
- Competitive compensation
- PTO Policy: Unlimited (Requires approval; 1 week per quarter is the company guidance)
- High ownership and architectural influence
- Long-term growth potential within the ecosystem
